

1. My desired degree is a computer science degree.
I plan to take this many classes per term two. It should take me twenty terms to finish my degree.
2. I am looking forward to these classes: (list at least 2 and explain why)
The first one is the CS 2205 Web Programming I.
I am really looking forward to this class because I think this class will teach me the skills I need to enable me to start working as a web developer, even just as a freelancer.

The second one is the CS 1102 Programming I

I am looking forward to this class because I think this class will enrich my skills and knowledge in my journey to get a degree.

The last one is the CS 4405 Mobile Application

I am also really interested in this class because the knowledge that I will gain will enable me to work on my own as a mobile app developer in addition to working as a web developer.

3. I am a little nervous or concerned about these classes (list at least 2 and explain why)
Math 1211 Calculus
I am a bit concerned about this class because math was never my strong point in school.

Math 1302 Discrete Mathematics

Another mathematics class I am concerned about, especially since the concept in this class is quite new to me.

Five skills I have mastered and their specific usage successfully

1. Active listening
I used this skill when calming down my upset friends.
2. Speaking a second language
I am able to speak in English on a professional level for my work.
3. Writing
I usually communicate better in writing than verbally.
4. Visualising
I am really good at visualising. This skill has helped me in the past to explain things or imagine what a design will look like once it is finished.

5. Reading

I have good reading comprehension, and I believe it helps me a lot during my study.

Five skills I have not mastered yet:

1. Decision making

It is one of the skills that I struggle with, and my perfectionism is not helping at all with this skill. I am currently working to improve my decision-making by stopping overthinking it.

2. Time management

I am struggling a bit in this department, as I used to just go with the flow and not really plan my things. Now I am planning to improve this skill by making a weekly timetable and daily to-do list in a priority-based order.

3. Consulting

I am improving this skill by studying a lot to become better in what I do and what I am planning to do in the future so I can be an expert in that field and become a consultant.

4. Supervising

To improve this skill, I am currently working by being mindful of others working with me and giving out positive feedback.

5. Manipulating numbers

I am currently not working on this skill. But I planned to do it by learning math, especially while pursuing this degree.
